Introducing Dura-Care 7500A TL-FBO:
3-Panel Trackless Automatic Sliding ICU Door with Full Breakout

As we relentlessly pursue the latest product innovation in our ICU/CCU portfolio, the fully automatic ProCare8300A, we have recognized an increased demand for ICU/CCU doors with automation.

As part of our new ICU door product roadmap, we have developed this solution to fulfill the demand by taking our tried and true Dura-Glide 5300 door and configuring it as a 3-panel ICU/CCU automatic door.

The result is the **Dura-Care 7500A TL-FBO**: ideal for critical care environments where CDO and hands-free operation are essential for patient care. In November 2017, the Dura-Care 7500A TL-FBO will be available to specify where an automatic 3-panel ICU door is required.

VALUE PROPOSITION

- **Quiet and smooth operation** with synchronized equal panels.
- **Wave plate activation for hands-free operation**, reducing the spread of germs and infectious diseases (hands-free operation on automatic package only).
- **Wide clear door opening**, at 52.6" on an 8' package for safe and for convenient patient transport.
- **Versatile**, the Dura-Care 7500A TL-FBO can be configured as manual or automatic; providing an alternative to the Dura-Care 7500 TLFBO (manual, non-synchronized panels) or the DG5300 (automatic.) See below for comparison chart.

APPLICATION

- ICU/CCUs
- Emergency Department Treatment Rooms
- Pre/Post Surgery Rooms
- Same Day Surgery Rooms
- Trauma Rooms
- Hospital In-Patient/Out-Patient Pharmacies

SPECIFICATIONS

CONFIGURATIONS:	3-Panel, Trackless (Automatic or Manual)
